

# Mirror Image!

**As part of our reflection work, we looked at mirrors and what happened to our image when we looked in a mirror. Everything was flipped! We had a go at using the mirror to view our feet to walk on the lines around the playground. It was quite tricky because when we moved it moved the opposite foot! We used mirrors because they are the best reflector as they are smooth and shiny which means light bounces from them but if the surface was rough the light would scatter instead.**
