

Year 2 had a visit from 'Jay's Animal Encounters'. Jay brought lots of different creatures for the children to learn about. His visit complimented our science work about the 5 animal groups; mammals, reptiles, amphibians, fish and birds. We saw the snails munching through the salad and Jay was delighted when we could tell him they were herbivores, we also knew that the hairy fly eating tarantula was a carnivore and that animals that eat plants and meat are omnivores. In our topic work, we have been learning about 'The Rainforest' and Jay told which different layers of the rainforest the different animals live in and why. Did you know, a spider that lives on the forest floor has its legs spread around its body in a circular shape, where as a spider that lives on the trunk of a tree has four legs at the front of its body and four at the back to help it to jump on the branches. It was fascinating!
